Points to note about the GP Carry （Standard type）

I. The GP Carry is a safe and easy to use transportation device for moving pianos, but because of the weight of the piano itself, there is a risk of serious accidents and other personal injury if it is used incorrectly or by not following the correct procedure. Please use it with a through understanding of the user’ s manual.

II. Please use the GP Carry on a floor that has a flat and even surface. The floor should be strong enough to support a total weight of approximately 600 kg or more.

III. Please do not leave the piano on the GP Carry in the lift position.
(This will put a heavy strain on the piano.)

IV. Make sure to maintain and inspect the GP Carry once a year.

V. The GP Carry is designed for indoor use only. Please store it indoors in a place with low humidity.

VI. Be careful to keep your feet clear of the GP Carry’ s casters.

VII Please do not work in slippers, etc, as this is very dangerous.
※We recommend that you work in safe shoes.
