INFORMATION SHEET
POLISHES FOR PRECISION GRIND

Art-No.: 274150
without silicone oil
A highly effective **polish for fine grinding**, based on a unique aluminium oxide quality for quick and efficient removal of flaws, small scratches and similar traces of use on lacquered surfaces.
Grooves are removed effortlessly by mediums of grain 2.500 and on the laquered surface a deep and permanent gloss is achieved. Our **polishing paste** has been especially designed for application on scratch-proof lacquers and because of that it's also highly recommendable on softer varnish coats.
A small amount of this paste goes a long way, it is well polishable, residue-free removable.

For all polyester and PUR lacquers.

Apply a small amount of the paste on the sponge of the polishing machine or whatever you use for application (we recommend our white sponge, hard art.No. 273553/273554 or a lambskin pad) and polish the pre-cleaned surface with max. 2.000 r.p.m. The cleaning efficiency can be changed by pressure, used medium for polishing and the number of revolutions . For the beginning of the polishing procedure we recommend to work the paste at higher pressure and less speed. geringer Umdrehungszahl zu verarbeiten. In the sequel reduce pressure and polish to high gloss at a higher number of revolutions. Leftovers of polish can be removed by means of our micro plus terry cloth art.No. 611005. When using new sponges we recommend the complete moistening with polishing paste. You can easily remove any arisen films or polishing traces by our **High Gloss Finish Art.No.: 274160.**

INFORMATION SHEET
HIGH GLOSS POLISH

Art-No.: 274160

Without silicone oil

The High Gloss Polish is a machine micro polishing agent of new generationfor effortless and permanent removal of polishing film, holograms and scratches just as grooves by medium of grain 3.000 on all lacquered surfaces (scratch-proof surfaces included). By use of highly specialised and extremely homogeneous grinding tools also on dark black surfaces under extreme light condition a brillant and permanent high gloss finish is achieved. Like polishing paste Art-No.: 274150, our High Gloss Polish is also very efficient, well polishable, residue-free removable.
For all polyester and PUR lacquers.

This polish can be worked rotatingly as well as eccentrically. In order to achieve an optimum result, we recommend to work this polish in combination with our **orange sponge art.No. 273553 or 273554 just as polishing machine 273000** or a rotation grinder with switched on obligatory rotation.
einem Rotationsschleifer mit eingeschalteter Zwangsrotation. When using new or dried sponges we recommend the complete moistening with the polishing liquid. AT first work at some pressure. Then you reduce pressure and polish in movements of
8'. For removal of polishing leftovers we recommend to use our **micro plus terry cloth art.No. 611005** together with **Polishing Water elegant, spray 610590**
For larger scratches use **Polishing Paste Art-No.: 274150**
